PREFACE

The New Elizabethan Reference Dictionary is an up-to-date vocabulary of the language as spoken and written in the mid-twentieth century. English has undergone considerable changes in the last thirty years; many new words have been adopted, and some older words have acquired new or modified meanings; it is the first duty of a dictionary to gather together these enrichments and changes. But it must be something more than a mere vocabulary, for English employs, to a marked degree, a number of metaphorical and other phrases which it is the task of the lexicographer to record. He must, too, take note of the many colloquialisms and expressive slang terms that are conclusive proofs of the virility of a modern language. It is claimed that in attention to these and many other details a work has been produced that will be of value and interest.

The New Elizabethan Reference Dictionary supplies a vocabulary of over a hundred and twenty thousand words and phrases. The first aim has been to give all the words in ordinary use, including scientific, technical and other specialized words likely to be met with by the reader or student, and a large number of combining forms (e.g. **ante-**, **anti-**, **arch-**, **dis-**, **-esce**, **-graph**, **homo-**, **-ish**, **-ize**, **-ing**, **myo-**, **-phile**, **sub-**) furnishing a key to the meaning of new coinages. Scottish and American words and phrases that have made their way into English are freely included, as are many words and phrases in common use in Australia, South Africa and other parts of the British Commonwealth of Nations.

Particular care has been devoted to the definitions. They are given clearly and concisely, but fully; and are couched in such language that the annoyance of having to make recourse to other parts of the Dictionary to arrive at the exact meaning of a word is reduced to a minimum. It will be found that the number of alternative expressions given for the same idea or object makes the possession of a separate dictionary of synonyms unnecessary to the writer or student who has *The New Elizabethan Reference Dictionary* at his side. The common or more usual meaning of a word has usually been given priority of place, and obsolete meanings (as also obsolete and archaic words) have been marked with an asterisk (*).

To obtain the most effective help from the Dictionary the following indications should be borne in mind.

The word itself is printed in large **clarendon** type; compound terms and derivatives are printed in a smaller **clarendon**. Where there are two or more words with identical spelling, the figures (1), (2), etc., are inserted

immediately after the word. Otherwise the pronunciation is given immediately after the initial entry. Then follows the etymology in square brackets, and after it the meaning (parts of speech being indicated by *n.*, *v.t.*, *v.i.*, *a.*, etc.), beginning with the ordinary signification of the word. The more specialized senses are indicated by the appropriate abbreviations in italics and enclosed in round brackets. Idiomatic uses are illustrated by phrases, and these are followed by a series of compound words having the main word as their first member.

This system of grouping has allowed a large number of words and phrases to be included that would otherwise have had to be omitted unless the volume were to assume unduly bulky proportions. Space has also been saved by merely indicating common derivatives ending in such terminations as **-al, -ity, -ive, -ness**, etc. (e.g. **postal, rapidly, rascality, suddenness**), the meaning of which is obvious from that of the root-word. When, however, some special force attaches to a derivative the meaning is fully set out (e.g. **exactly, readily**). Suffixes, prefixes, and other combining forms have been inserted in the body of the work in their alphabetical order, and a further saving of space has been effected by the insertion of cross-references in SMALL CAPITALS.

The aim of the etymologies has been to show both the proximate and the remoter origins of words, when these have been ascertained or a probable derivation can be suggested. Thus, it is shown as briefly as possible that the word **post** comes to us from the Latin *posita* through the French *poste* and the Italian *posta*; and the formation of the Latin *posita* as a feminine participle of the verb *ponere* is also explained. In numerous instances, especially in words of Teutonic origin (e.g. **horse, moon**), a selection of cognate words are quoted as they throw light on the history of the word in question.

The scheme of pronunciation (see p. xiii) is simple, and though it does not attempt to reproduce the extreme niceties of phonological exactitude it is perfectly adequate for giving a clear indication of the way in which the individual word is pronounced. It will be noticed that syllables have been separated in the statement of pronunciation, though in actual speech these tend to glide into one another. The syllable to be stressed is indicated by the accent which follows it, e.g. the noun **present** (prez' ĕnt) or the verb **present** (prē zent'). When two or more pronunciations are given the one recommended for use is placed first.

The Appendices provide (i) a translation of foreign terms and phrases in common use; (ii) a pronunciation guide to English and foreign proper names that sometimes present difficulty; (iii) a list of Abbreviations, Signs and Symbols in general use; and (iv) a Table of British and Metric Weights and Measures.

An outstanding feature of *The New Elizabethan Reference Dictionary* is

the inclusion of more than fifty special reference supplements, containin information on a wide variety of subjects presented in concise, ready-referenc form by a panel of expert contributors. These subjects are grouped unde nine major headings:

(i) *The World To-day*, which includes a guide to the British Commonwealth of Nations and other countries of the world; an account of the United Nations and other international organizations, alliances and treaties; and quick reference tables of the chief physical features of the world.

(ii) *Travel Abroad*, explaining how to go, how to obtain passports and visas, how to take a car or motor-cycle; and including a table of distances to leading cities in Europe.

(iii) *Science*, in which are given up-to-date accounts of Radar, Atomic Energy and Interplanetary Travel; astronomical information, and any number of useful tables and formulae.

(iv) *Literature*, comprising two supplements, one giving the chief characters and names in the works of the world's greatest writers; the other constituting a valuable guide to the chief figures in classical Mythology.

(v) *Past and Present*, being a guide to great events from the earliest times to the present, with a comprehensive Biographical Supplement about the leading gures of yesterday and to-day.

(vi) *The Law*, with Glossary of Legal Terms and special supplements on Landlord/Tenant relationships, House Purchase, Wills, Husband and Wife, Rates, and many other matters.

(vii) *Business Man's Guide*, comprising a useful Glossary of Business Terms; an explanation of the proper Ceremonious Forms of Address; guides to the Conduct of Meetings, Taxation, and National Insurance; Ready Reckoner, Percentages Reckoner and Wages Table.

(viii) *In the Home*, six supplements dealing with matters of day-to-day interest in and about the home, including First Aid, Household Emergencies, Gas and Electricity Meters, Hot Water Systems, Indoor Plants, Pets and Livestock.

(ix) *General Knowledge*, including a comprehensive list of Christian Names, with their meanings; famous records, and other useful information.

The wide scope of the reference supplements is completed by the inclusion of a specially-prepared Atlas.

th ,, ,, thine (*th*īn), breathe (brē*th*).

The accent (′) *follows* the syllable to be stressed.

Words are the dress of thoughts, which should no more be presented in rags tatters, and dirt, than your person should.

Earl of Chesterfield.

THE NEW ELIZABETHAN REFERENCE DICTIONARY

A

A, a, the first letter in the English alphabet, and in most others derived from the Phœnician. In English it has five sounds: (1) open, as in *far, father, mikado*, left unmarked in this dictionary, **a**; (2) short, as in *fat, man, ample*, marked **ă**; (3) long, as in *fate, fame*, marked **ā**; (4) broad, as in *fall, appal*, spelt **aw**; (5) the long sound modified by the letter **r**, as in *fur, bear*, marked **â**. In unaccented syllables **a** is often slurred and obscured, as in *separate* (adj.), *amidst*, marked with a dot above it, **ȧ**. **A**, the sixth note of the diatonic scale of C major, corresponding to *la* in tonic sol-fa notation; the scale of a composition in which the keynote is **A**. **A1** (ā wŭn'), *a.* First class in Lloyd's Register of ships; first class.

a (ă or ȧ), **an** (ăn) [A.-S. *an*, one], *a.* A weakened form of one, sometimes called the indefinite article, used before singular substantives to denote an individual of a class. *A* is used before words beginning with a consonant, *h* aspirate, or *eu* or *u*, with the sound of *yu*, also before *one* (wŭn). *An* is sometimes used before *h* in an unaccented syllable, *e.g. an historian*. In such phrases as *twopence an ounce, twice a week*, it has a distributive force. Also used before collective phrases like *a hundred men, a dozen eggs, a few, a good many*, *i.e.* a hundred of men, etc.

a-, *pref.* (1) [A.-S. *on, an*] (*prep.*), as in *aboard, adying, afoot*; (2) [A.-S. *ar-* or *a-*, cp.
